Health & Adult Services Clients

Higher rates among ages 18-64 due to more providers in the area (Botton, Wilf Ward, Avalon) leading to Ordinary residence issues. 15.9 clients per 1000 population in Whitby compared with an NY average of 10.4

Scarborough town has a higher rate of older people in the 65-84 age group needing services (47.6 per 1000 population compared with 40.4 outside Scarborough and Whitby town)

This is reflected in that proportionally fewer people need care in Scarborough town at the 85+ age group. This is due to the reduced life expectancy in some parts of the district
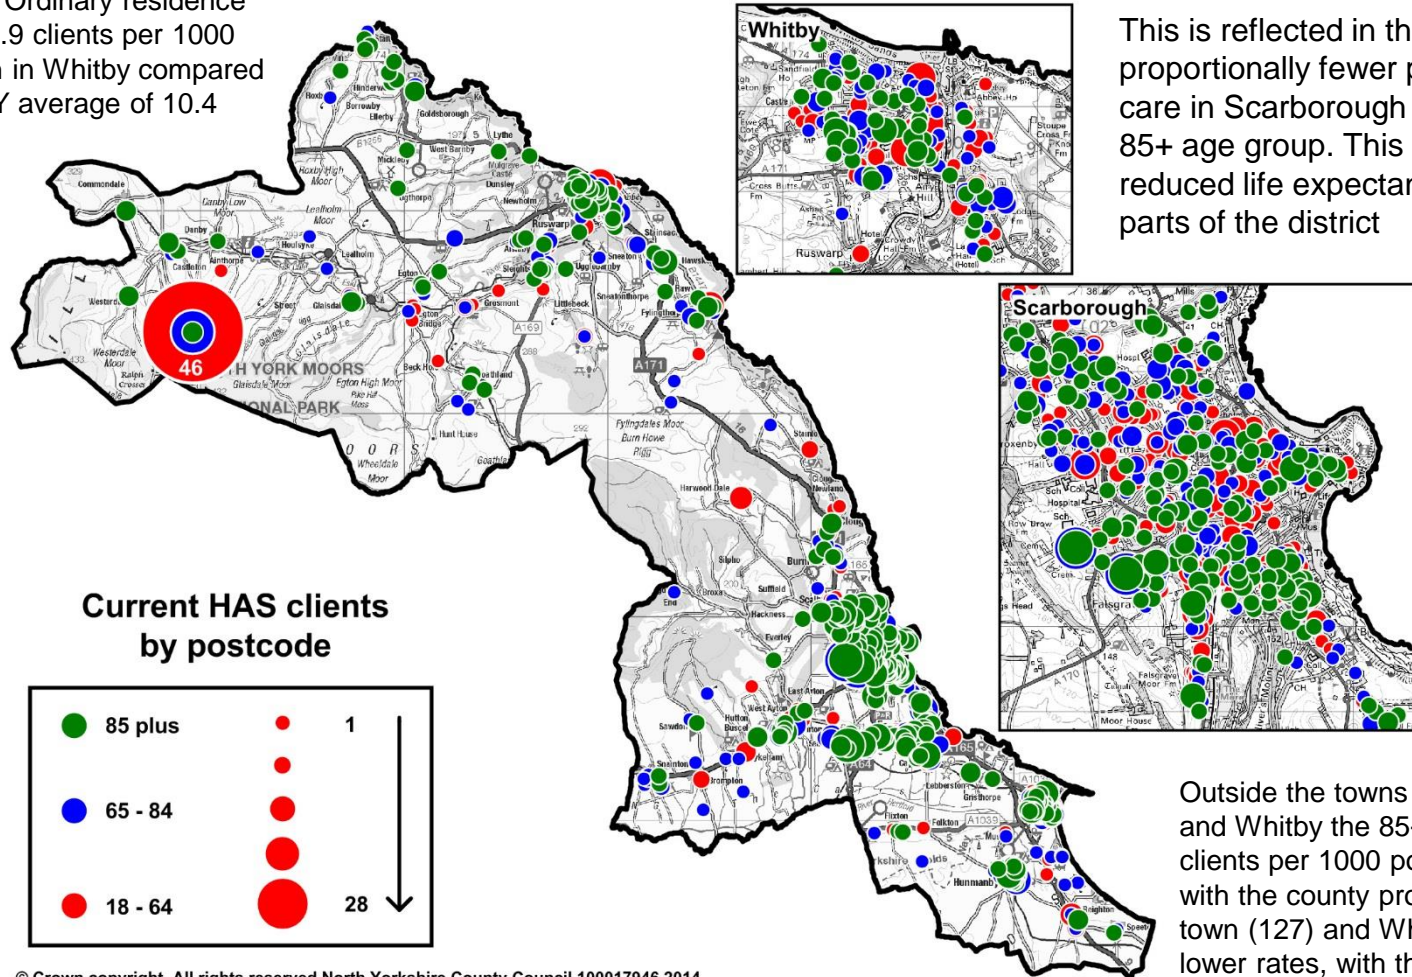

Current HAS clients by postcode

- 🟢 85 plus
- 🔵 65 - 84
- 🔴 18 - 64

1
28

Outside the towns of Scarborough and Whitby the 85+ age group (132 clients per 1000 population) is in line with the county profile. Scarborough town (127) and Whitby (111) have lower rates, with the demand for services now being higher in the more affluent country areas

Main customer groups in Scarborough Town

9% of households are Group 5B. These are often married residents with an older than average age profile. They live in semi-detached housing that they own outright or with a mortgage. Rental levels are low. Administrative and sales occupations are common, self-employment and home working less so.

22% of households are Group 7. These residents often live in in terraced housing that they rent privately or own with a mortgage. There is a younger age profile than found elsewhere. Marriage levels are lower than average and adult residents are often co-habiting or living on their own with above average numbers of lone parent households. Economic activity levels are high but benefit claimant levels are also high. Car ownership is low and a significant proportion travel to work on foot.

7% of households are Group 8B. These residents are often aged 65 - 84 and living in socially rented properties, many of these semis or flats. The proportion of residents aged 85+ is almost three times the county average. Many of the residents are living on their own, often widowed. Likely to be retired, the proportion of residents without any qualification is the highest in the county. There is a low level of passport ownership. This group has the worst level of health of all groups.

8% of households are Group 8A. These residents likely to be aged over 65 and living in privately or socially rented flats. Many of these residents are living on their own, often widowed. Some are living in communal establishments. They are likely to be retired and with a below average level of health. ESA and incapacity benefit claimant levels are high. This group is not as well qualified as some others and over a quarter of residents have no qualifications.

19% of households are Group 6A. These are often single residents, aged 16 to 29 and living in high density urban flats rented privately or socially. A quarter of properties, often B&Bs or bedsits, are vacant. One in ten properties has no central heating. Unemployment and other benefit levels are very high. Almost a third of residents have no qualifications. Those in work often work in elementary occupations and the accommodation and food service industries. Health levels are poor and more households than average contain an individual with a life limiting illness or disability.

6% of households are Group 6B. These are mostly single residents with a high proportion aged 25 to 44. They live in high density urban housing, mostly flats that they rent privately. This group often work in service, sales or elementary occupations in the accommodation and food services sector or in wholesale and retail trades. A fifth of residents were born outside of the UK, half of these in other EU countries and half elsewhere. Many of these residents do not have English as a main language. Health is worse than average and benefits levels higher.

14% of households are Group 9B. These are often families or lone parents living in socially rented semi-detached and terraced housing in urban areas. The group has a young age profile. More likely to be unemployed or looking after home and family than other groups, a high proportion of households have no adults in employment. A third have no qualifications. Those in work tend to be in semi-skilled or unskilled jobs in the manufacturing or service sectors. Women tend to work part time. Health is poor.

8% of households are Group 9A. This group is often comprised of families living in semi-detached or terraced housing that they own although some rent socially. There is a higher proportion of residents aged 0-15 than seen elsewhere. These residents are likely to be employed but qualification levels are lower than average and semi-skilled and unskilled occupations are common. The level of benefits take up is slightly higher than average. Health levels are below average.
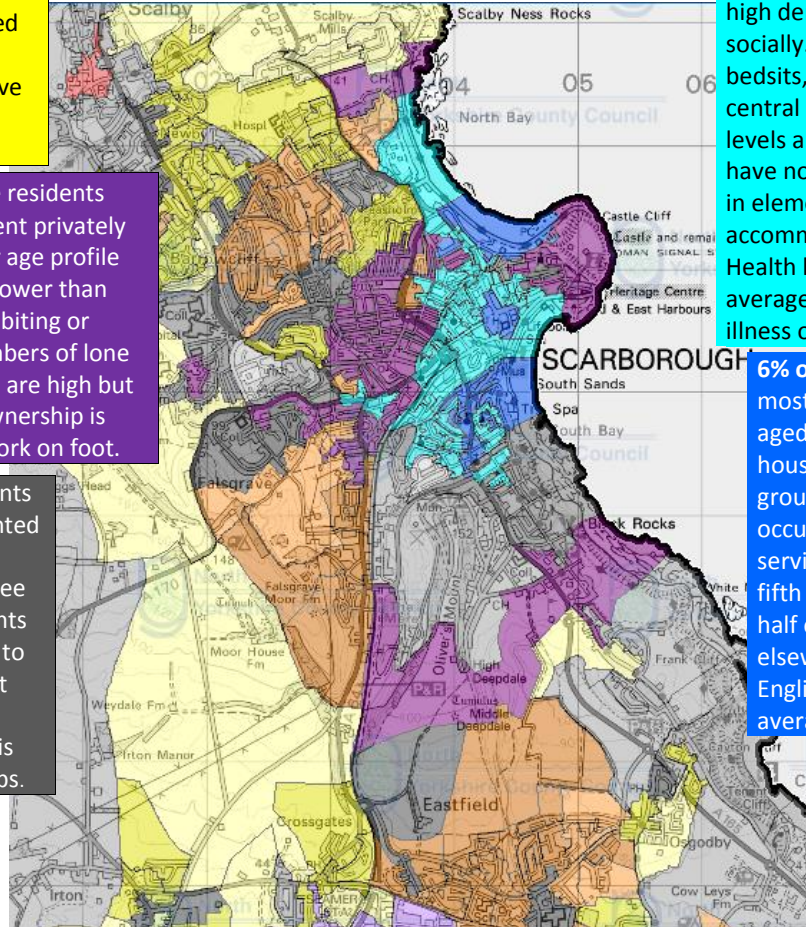

Main customer groups within Whitby Town

17% of households are Group 9A. This group is often comprised of families living in semi-detached or terraced housing that they own although some rent socially. There is a higher proportion of residents aged 0-15 than seen elsewhere. These residents are likely to be employed but qualification levels are lower than average and semi-skilled and unskilled occupations are common. The level of benefits take up is slightly higher than average. Health levels are below average.

12% of households are Group 8B. These residents are often aged 65 - 84 and living in socially rented properties, many of these semis or flats. The proportion of residents aged 85+ is almost three times the county average. Many of the residents are living on their own, often widowed. Likely to be retired, the proportion of residents without any qualification is the highest in the county. There is a low level of passport ownership. This group has the worst level of health of all groups.

11% of households are Group 8A. These residents likely to be aged over 65 and living in privately or socially rented flats. Many of these residents are living on their own, often widowed. Some are living in communal establishments. They are likely to be retired and with a below average level of health. ESA and incapacity benefit claimant levels are high. This group is not as well qualified as some others and over a quarter of residents have no qualifications.
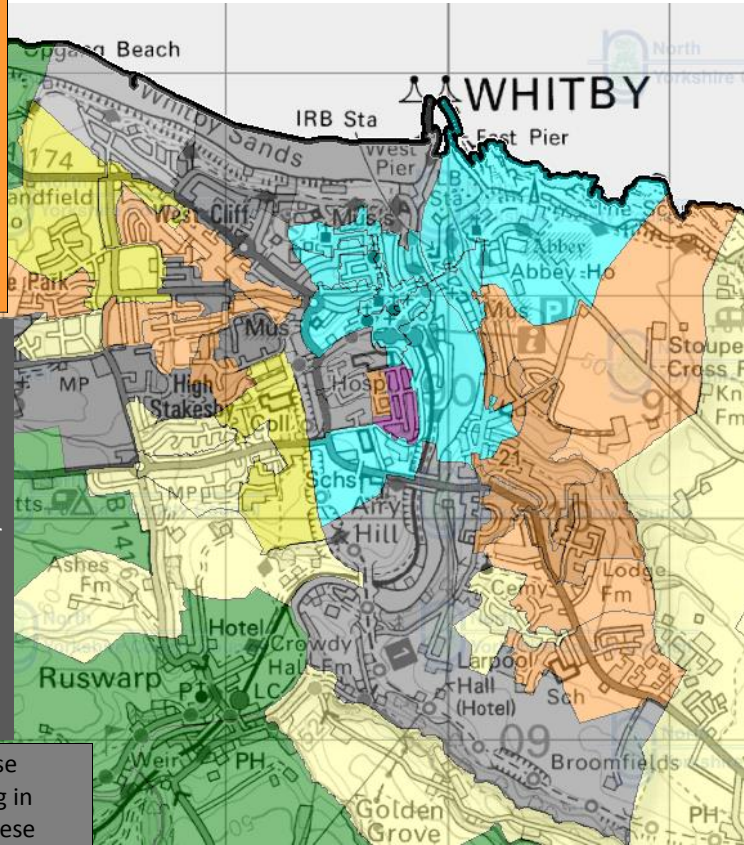

12% households are Group 5A. These are often married residents aged 45-74 living in detached or semi-detached housing that they own outright or with a mortgage. Health levels are average. Car ownership levels are slightly higher than average.

20% of households are Group 6A. These are often single residents, aged 16 to 29 and living in high density urban flats rented privately or socially. A quarter of properties, often B&Bs or bedsits, are vacant. One in ten properties has no central heating. Unemployment and other benefit levels are very high. Almost a third of residents have no qualifications. Those in work often work in elementary occupations and the accommodation and food service industries. Health levels are poor and more households than average contain an individual with a life limiting illness or disability.

14% of households are Group 9B. These are often families or lone parents living in socially rented semi-detached and terraced housing in urban areas. The group has a young age profile. More likely to be unemployed or looking after home and family than other groups, a high proportion of households have no adults in employment. A third have no qualifications. Those in work tend to be in semi-skilled or unskilled jobs in the manufacturing or service sectors. Women tend to work part time. Health is poor.

96 of households are Group 5B. These are often married residents with an older than average age profile. They live in semi-detached housing that they own outright or with a mortgage. Rental levels are low. Administrative and sales occupations are common, self-employment and home working less so.
